

REAL bulk ATAC-seq: human monocyte-derived macrophages (GSE172116), acute LPS (HD) vs untreated (UT) vs endotoxin-tolerance (LDHD), GRCh38. Accessibility = enrichment fold over each sample's own chr22 background (scale-free).
NRF2 = JASPAR MA0150.3 scan of peak sequences (Ensembl). Myeloid inflammatory-chromatin reference, NOT SAH/brain-scATAC. Motif activity is a single-TF real-peak proxy, not full chromVAR.
