Mouse SAH immune atlas (GSE311852): HDFI programme across cell types over time

Sham (d0) SAH 24h SAH 72h

Honesty & scope notes

DATA: GSE311852 = MOUSE (Mus musculus) CD45+-sorted immune cells, injured hemisphere. In-vivo cross-species mechanistic corroboration ONLY -- NOT human, NOT SAH-CSF.
Cells analysed: n=15000 (seed=0, subsampled from 43659)
Detected HDFI genes: Hmox1, Fth1, Ftl1, Gpx4, Acsl4, Hp, Cd163, Tfrc, Slc40a1
Not measured: none
HDFI composite computable: True

Myeloid HDFI_mouse medians Sham=-0.77, 24h=0.39, 72h=-0.04
Kruskal-Wallis (CELL-level) p = <2e-16
Sham_vs_SAH24: p=<2e-16, medDiff=+1.16 [+0.98,+1.33]
Sham_vs_SAH72: p=<2e-16, medDiff=+0.73 [+0.60,+0.89]
SAH24_vs_SAH72: p=2.9e-16, medDiff=-0.43 [-0.52,-0.32]

CAVEAT: cell-level p are PSEUDO-REPLICATED (cells are not independent). Only 5 samples (Sham n=1, 24h n=2, 72h n=2): sample-level testing UNDER-POWERED -> descriptive only.
